Professional Summary

DevOps engineer with 2+ years of experience in CI/CD automation, container deployments, and monitoring of web and server systems. Full-time DevOps intern at [VK](#), working with Docker, GitLab CI/CD, Kubernetes, Kotlin DSL, and the Prometheus, Loki, and Grafana stack. I have led technical coordination for teams of 5–7 people, built CI/CD pipelines, and kept self-hosted runners and Docker-based infrastructure running for academic projects and hackathons. I learn new technologies quickly, focus on reliable automated solutions, and am interested in integrating AI into my services.

Soft Skills

Leadership & coordination

I coordinate technical work on student and hackathon projects in teams of five to seven people: priorities, task alignment, and keeping delivery on schedule.

Teamwork

I take part in code review and task discussions. When needed, I help redistribute work so the team meets its deadlines.

Communication

I present results clearly in writing and in person, with minimal jargon. I flag risks and open questions early.

Planning & deadlines

I divide work into stages and agree on dates. If plans change, I inform the team promptly so we can adjust.

Ownership

I treat CI/CD, runners, and releases seriously: reproducible steps and short documentation for colleagues.

Learning & adaptation

I learn new technologies and processes quickly through documentation, targeted questions, and validation on small tasks before scaling up.

Education

Innopolis University, third-year Software Development student, 2023-2027. GPA: 4.6.

Languages: Russian (native), English (B2+).

Student life

- Group representative (староста) — September 2023–present.
- Student Union — participant (October 2024–January 2026); Chairman (June 2025–January 2026).
- University ambassador — September 2023–present.
- Head of the representatives committee — June 2025–present.

Limited scholarship from Innopolis alumni: 1519.innopolis.university.

Loki

Grafana

Full-time DevOps intern. I work on containerization, CI/CD, Kubernetes, and observability, and I help maintain pipelines, infrastructure configuration, and monitoring.

Projects

WikiLive

Frontend engineer, technical coordinator · Winner, "Best Solution"

April 2026

React TypeScript Vite Mantine Yjs BlockNote Java Spring Boot Node.js
Express Hocuspocus OpenAPI PostgreSQL MongoDB MinIO Flyway
Docker Compose Kubernetes Caddy Prometheus Grafana Loki

A real-time collaborative document platform. I shaped the idea, product logic, and MVP scope, coordinated the team, and contributed to the frontend (React, TypeScript, Mantine, BlockNote, Yjs). The stack also includes backend and realtime services in the monorepo.

Repository: github.com/motor-screwdriver/mts-true-tech-hack-26

VolgaTrail

Product/UX logic, Documentation

April 2026

TanStack Start React TypeScript Tailwind CSS Leaflet OSRM Vitest Vercel
Docker Markdown

A web application for planning scientific walking routes in Innopolis. The service combines an interactive map, points of interest, OSRM routing, and several user scenarios: guided lectures, custom routes, and length-based route generation.

Elect.Gen

Backend + DevOps Engineer, Technical Product Manager

June - July 2024

FastAPI

SQLAlchemy

PostgreSQL

Docker

Swagger

GitHub Actions

GitLab CI

Website for the Innopolis University Department of Education for automatically assigning students to selected electives. Developed REST API endpoints, coordinated a 5-person team, organized the code review process, and set up a CI/CD pipeline for automated testing and deployment.

Repository: github.com/quintet-sdr/elect-gen-backend

FIX Remont

Backend Developer

May - December 2024

FastAPI

SQLAlchemy

PostgreSQL

Swagger

Postman

Website-constructor for building country houses construction. Developed REST API with 25+ endpoints, conducted testing through Swagger/Postman, connected database.

DishDash

DevOps Engineer, Technical Product Manager

June 2024

Dart

Flutter

GitHub Actions

Cross-platform Flutter application working with an external API. Developed the application architecture, introduced tests and CI checks, deployed builds as artifacts, and led the team. Repository: github.com/Linch-mini/DishDash

Other Projects

Home Docker Server Infrastructure

March 2025 - Present

Docker

Docker Compose

Ubuntu

FastAPI

Built and manage home server infrastructure using Docker containers. Deployed various services including web applications, databases, and monitoring tools with automated deployment pipelines.

Academic Projects

2023 - 2026

Go

Python

Java

Haskell

C/C++

Flutter/Dart

Several university projects spanning backend and REST APIs, Flutter mobile work, and coursework in systems- and application-level languages.
